The Ultimate Hack: Resilient Villages, Smart Cities, Prosperous Nations at Peace (Re-Engineering Earth Book 3)

The Ultimate Hack: Resilient Villages, Smart Cities, Prosperous Nations at Peace (Re-Engineering Earth Book 3) PDF Books by Robert David Steele Vivas uploaded on Sep 19, 2020 can download for free.

"The Ultimate Hack: Resilient Villages, Smart Cities, Prosperous Nations at Peace (Re-Engineering Earth Book 3)" one of the best from Robert David Steele Vivas and has been published on 2021 ago.

This is only PDF generator result for the preview and PDF Book Onlines not place PDF downloadable The Ultimate Hack: Resilient Villages, Smart Cities, Prosperous Nations at Peace (Re-Engineering Earth Book 3).

The new Secretary General and new Deputy Secretary General of the United Nations -- and the new President of the United States as well as the Prime Minister of India and a few others -- have an opportunity to re-engineer Earth. Open Source Everything Engineering (OSEE) is the foundation for achieving the Sustainable Development Goals in a fraction of the time at a fraction of the cost of the existing industrial-proprietary-donor model that is not working. C. K. Prahalad (RIP) has shown us the way -- the center of gravity is at the bottom of the pyramid, where five billion poor have an annual economy four times that of the one billion rich -- an economy that is distributed rather than concentrated. The opportunity is to be found in a combination of Open Source Information Technology that can eliminate the 80% waste in the existing industrial-donor model (electronic banking to the village level) and Open Source Engineering beginning with open source solar energy and open source water desalination (or in the case of the Ganges, open source water purification). Self-reliant villages -- starting with 10,000 villages across India and then China and Indonesia and everywhere else -- are the starting point. Open Source Engineering Innovation Centres can be established that very rapidly allow villages to be self-sufficient in power, water, communications, and then in other areas. Smart Cities must be designed from the bottom up -- not the foolish imposition of "smart" communications on industrial era artifacts. The existing cities -- and transport or another systems -- are all, without exception, 50% waste. They are not the product of holistic analytics, true cost economics, or Open Source Everything Engineering (OSEE). After launching the Resilient Villages initiative we need new mid-size Smart Cities (connected to one another by high-speed rail) that are designed as Melissa Sterry suggests: "as if nature were designing them." Prosperous Nations at Peace come about when we stop the United States of America from being the greatest purveyor of corruption, theft, and violence on the planet. It is possible that President Donald Trump will not only shut down NATO, but also close all US military bases overseas -- bases that are used as lily pads for the Deep State's smuggling of drugs, money, gold, guns, and children. We must end all regime change operations, end financial support to all dictators, and focus on respecting and enriching indigenous populations. At a meta level, the energy challenge has been solved, only corruption delays the implementation of massive distributed solar energy solutions. The next challenge is the water challenge. Open Source Everything Engineering (OSEE) makes possible the creation of 146,000 water desalination and purification plants for just \$364 billion -- one tenth the cost proprietary industrial technologies. With respect to refugees, Open Source Everything Engineering (OSEE) makes possible the transformation of millions of individuals now abandoned or at best garrisoned in over-crowded refugee centers, into fully self-sufficient prosperous villagers with solar power, unlimited desalinated water, an aquaponics industry, unlimited free cellular and Internet, and more. The United Nations -- and the Governments of India (brainpower) and the USA (\$2 billion a year for an Open Source (Technologies) Agency -- have the power, right now, to transform the world with Open Source Everything Engineering (OSEE). The greatest obstacle to peace and prosperity is not the belligerent Member states of the United Nations, but rather the recalcitrant passive-aggressive bureaucrats surrounding the leaders of the UN, India, and the USA.
